Subject: Reason for rock revetment
To: Lester.LesterLaw@gmail.com <Lester.LesterLaw@gmail.com>

The reason a rock revetment is needed is to break the wave action to keep the concrete bulkhead and structure behind bulkhead from eroding because the water levels are so high.

My property has washed away and fallen into the lake. Beautiful land and beach
In front of my home which we once had, has vanished into the high waters. After
the storms in the 1970s, we built a protective area along the lakeshore, which we
thought would save my home from ever being at risk again of fallen into the lake,
as well as protect our lake front land.

My home has already been moved back as far as it can go. I have lost a great deal
of lake frontage, which once was yards of land and beach. and now has left us
without any beach at all, and has taken away my land that is being undermined
and threatening my home. The water level
Is so high, that we need to place rocks in there because there is no other place to
put the rocks for my home's protection.
